

2018 G80

Product Reference Guide

GENESIS

Key Features

“Genesis Complete Confidence”

Safety Technology

- 9 Airbags
- Vehicle Stability Management System:
 - Electronic Stability Control
 - Traction Control System
- Anti-lock Braking System
- Electronic Brake-force Distribution
- Brake Assist
- Automatic Emergency Braking with Pedestrian Detection
- Lane Departure Warning with Lane Keep Assist
- Smart Cruise Control with Stop/Start
- Blind Spot Detection w/ Rear Cross-traffic Alert and Lane Change Assist
- Full-color Heads-up Display (5.0 Ultimate, 3.3T Sport, optional 3.8)

Powertrain Technology

- 3.8-liter direct-injection V6 engine
- 5.0-liter direct-injection high-output V8 engine
- 3.3-liter direct-injection twin-turbocharged V6 engine
- 8-speed SHIFTRONIC® automatic transmission w/paddle shifters
- Intelligent Drive Mode—Eco, Normal, Sport & Snow Mode

- HTRAC All-Wheel Drive (optional 3.8, 5.0 Ultimate, 3.3T Sport)
- EPA-Estimated Fuel Economy:
 - 19 city / 27 highway / 22 combined (3.8 RWD)
 - 18 city / 25 highway / 20 combined (3.8 AWD)
 - 16 city / 24 highway / 19 combined (5.0 Ultimate RWD)
 - 15 city / 23 highway / 18 combined (5.0 Ultimate AWD)
 - 17 city / 25 highway / 20 combined (3.3T Sport RWD)
 - 17 city / 24 highway / 20 combined (3.3T Sport AWD)

Comfort and Convenience

- Genesis Connected Services® Telematics System
- Lexicon® Premium Audio with Quantum Logic Surround & Clari-Fi™ Music Restoration Technology (5.0 Ultimate, 3.3T Sport, optional 3.8)
- Dual mode front vent control with CO₂ sensor (5.0 Ultimate, 3.3T Sport, optional 3.8)
- Hands-free Smart Trunk with auto open
- Power Trunk Lid (5.0 Ultimate, 3.3T Sport, optional 3.8)
- Panoramic Sunroof (5.0 Ultimate, 3.3T Sport, optional 3.8)
- Power Tilt & Telescopic Steering Wheel
- Heated Steering Wheel (3.8 AWD, 5.0 Ultimate AWD, 3.3T Sport AWD)

MAP CARE	3 YEARS FREE MAP UPDATES

Automatic Emergency Braking with Pedestrian Detection

Uses both cameras and radar sensors to “see” what is happening up ahead to help avoid a potential collision or reduce its impact. The system is designed to detect a vehicle or pedestrian and warn the driver of a potential collision. If the driver doesn’t maneuver to avoid the impact, the system will apply emergency braking.

High Beam Assist

Allows the driver to help keep his or her eyes on the road and let the headlights deliver maximum visibility without accidentally blinding oncoming traffic. When selected, a forward-facing camera detects the headlights of an oncoming vehicle, or the taillights of a vehicle being overtaken, and automatically switches to low beams. High beams return when the road is clear of other vehicles.

Blind Spot Detection

Helps monitor traffic around the car. The system uses radar sensors in the rear bumper to warn the driver of a vehicle in the vehicle’s “blind spot.” The initial alert is warning lights in the outside mirrors.

Lane Change Assist measures the closing speed of an approaching vehicle in the adjacent lane to determine whether changing lanes is safe and, if not, gives the driver an audible and visual warning.

CO₂ Sensor

While driving, carbon dioxide can build in the cabin of a vehicle and can make the occupants drowsy. The CO₂ Sensor detects higher carbon dioxide levels, and then automatically activates the ventilation system to add fresh air to the cabin, which helps reduce fatigue and driver drowsiness.

Driver Attention Alert

Monitors the driving position to detect reckless or fatigued driving and recommend that the driver take a break. Displays driving status level in the multi-information display. Analyzes the driving pattern through vehicle signals such as steering angle, steering torque and vehicle position in traffic lane. Attracts driver’s attention with a pop-up message and audible warning suggesting that the driver “consider taking a break”

Electronic Parking Brake with Automatic Vehicle Hold

When the driver brakes to a stop, the Automatic Vehicle Hold feature helps keep the brakes applied until the driver presses on the accelerator again. This feature holds the vehicle on hills or level ground. When the driver pulls away, Automatic Vehicle Hold will release.

Hands-free Smart Trunk with Auto Open

Releases the trunk lid automatically when you stand within 3 feet behind the vehicle with the Proximity Key in your possession for more than 3 seconds. This is a convenient feature, especially when your hands are full.

- For “smart” trunk function: all of the doors must be closed and locked for at least 15 seconds and the driver’s proximity key must have left the sensor’s range, at least momentarily (like going into a store)
- Upon returning to the sensor’s range, at the rear of the vehicle, the hazard warning lights will blink and a chime will sound for about 3 seconds to alert you the Proximity Key has been detected and the trunk will unlatch
- There’s no need to kick or wave your foot to get the trunk to open like some other vehicles on the market

Haptic Steering Wheel

Alerts the driver with a vibration through the steering wheel (it feels like someone is shaking the steering wheel).

- It works in conjunction with the Lane Departure Warning system and Blind Spot Detection system
- Blind Spot Detection issues an audible warning as well as haptic steering wheel vibrations
- The Haptic Steering Wheel warns the driver due to inadvertent lane departure or blind spot detection with turn signal, and helps increase driver reaction to unintended lane departure, which could be caused by being drowsy or careless driving

Full Color Heads-up Display

Displays all of the relevant information in the driver's line of sight, which significantly reduces driver distraction.

- Speed, cruise control, turn-by-turn navigation, Lane Departure Warning System, Blind Spot Detection, Forward Collision Warning and speed limit can all be projected in the driver's line of sight – projected items can be turned on or off
- Heads-Up Display viewing position is linked into the Integrated Memory System

HTRAC® All-Wheel Drive (AWD)

Available on G80 AWD – this “smart” all-wheel drive system distributes power to all four wheels for the best traction. In addition, while delivering all-weather security, HTRAC is also programmed to optimize performance-oriented dry-pavement driving.

- All modes are programmed in concert with G80's Intelligent Drive Mode, which alters the steering, transmission, throttle, and Electronic Stability Control/Traction Control System to give you control tailored to each environment and condition
- **Normal and Eco modes** – helps provide confident control in most weather conditions
- **Sport mode** – gives a more agile feel by sending as much as 90% of the available torque to the rear wheels, for a sporty rear-drive dynamic feel
- The system can direct more available torque to the rear wheels during steady-state highway cruising for reduced drivetrain frictional losses and noise to maximize fuel efficiency.
- This system has a wider range of torque distribution variability than many competitive systems and has been tuned to variable conditions such as straight-line acceleration, medium- and high-speed cornering, and hill-starts.

Integrated Memory System

A two-driver memory system for the driver seat, power tilt-and-telescopic steering wheel, and outside mirror settings.

Lane Departure Warning

Uses the forward camera to recognize lane markers. If the system detects that the vehicle is headed outside the markers, a warning light on the instrument panel flashes and an audible sound also alerts the driver.

Lane Keep Assist works with Lane Departure Warning to provide a driver-adjustable level of steering assist to help prevent inadvertent lane departure when the vehicle approaches the edge of the lane. This also alerts the driver with haptic steering wheel feedback.

Proximity Key with Push Button Start

The Proximity Key allows the driver to keep the key fob in their pocket/purse when unlocking, locking and starting the vehicle. The vehicle identifies the key, at a distance of three to four feet, using one of several antennas in the car's bodywork and a radio pulse generator in the key fob. From the outside, with the key in range, the vehicle is accessed using a button on the door handle or using the trunk release.

Inside, when the Proximity Key is present, the vehicle is started by simply pressing the vehicle's START button. Proximity keys include a removable, mechanical key as a backup, in case the battery in the fob loses power. In these cases, the driver's door can be opened using the mechanical key. Then the vehicle can be started by pressing the Proximity Key fob against the START button.

Rear Cross-traffic Alert

Alerts the driver to approaching vehicles, when backing out of a parking space, with an audible alert and warning lights in the outside mirrors. Sensors can detect a moving vehicle as far away as 65 feet. The system will not consistently warn the driver of smaller objects, such as pedestrians or shopping carts.

Front and Rear Parking Sensors

Uses sonar sensors in the rear bumper to sense objects near the rear bumper. Activates when the transmission is in Reverse. On-screen guides show objects within approximately 6 feet, 4 feet and 1 foot. At 6 feet, the system sounds warning beeps. The beeps get faster as the vehicle approaches the object. If the object is less than 1 foot away, the warning tone sounds continuously.

- Rear system is automatic

Front Parking Sensors

- Front system must be turned on for use

SiriusXM® Travel Link

Travel Link® (3-year complimentary service) adds unique, additional capabilities and features to SiriusXM. Includes:

- XM Traffic, Sports, Weather, Stocks, Fuel Prices and Movies
- Smart Favorites: Buffers multiple favorite channels (up to six presets)
- Featured Favorites: Convenient additional preset stores broadcasts by SiriusXM
- Additional multicultural channels
- Recording feature for SiriusXM presets 1–6

Smart Cruise Control with Stop/Start

Uses the front radar sensor. The system operates like a conventional cruise control on an open road to maintain a set speed. When traffic appears ahead, the system's radar senses the distance to vehicles in front, automatically applies the brakes and gently slows the vehicle to maintain a desired distance between the G80 and the vehicle ahead.

Tire Pressure Monitoring System Individual Tire Pressure Indicator

This system monitors the air pressure in each of the tires; if the air pressure is low in one of the tires, the instrument panel display is illuminated to show which tire has low air pressure.

- Maintaining the proper tire pressure is important because with the correct air pressure, your tires wear longer, help save fuel, enhance handling

Ventilated Front Seats

The seats include fans that circulate air through the seat, to help cool the occupant on a hot day. In addition, they can help reduce the temperature of the seat if the vehicle was parked in the sun. While ventilated seats help make the seats more comfortable in the summer, heated seats make the seats more comfortable in the winter, providing year-round comfort.
